Software Development (Front-end/ Full Stack) | End-to-End Enterprise Development | Product Development

Location Preference: Europe, preferably Germany & Luxembourg

Impact-Driven Senior Software Engineer, delivering resilient, cloud-native and user-centric applications that accelerate digital transformation and operational efficiency

EXECUTIVE SUMMARY

- **A dedicated professional** with **5+ years** of experience delivering scalable, secure, and high-performance web applications across **GovTech, Healthcare AI, and FinTech domains**
- **Strong expertise in Angular and Node.js**, building modern frontend interfaces and architecting robust full stack, enterprise-grade solutions
- **Experienced in microservices architecture**, REST/SOAP integrations, real-time systems, and cloud-native deployments on AWS
- **Proficient in application architecture**, design principles, and end-to-end solution development including requirement analysis, system design, integration, testing, and production support
- **Adept at translating complex business** requirements into scalable technical solutions within Agile Scrum environments
- **Committed to writing clean**, maintainable, and secure code, driving continuous improvements in performance, system reliability, and deployment speed through robust CI/CD practices
- **Strong problem-solving mindset** with the ability to collaborate effectively with stakeholders and drive technology-led business outcomes

Professional Skill Set

Software Development (Full Stack) | Frontend Engineering | Enterprise & Product Development | Project Execution | Unit, Integration & Performance Testing | Agile & Scrum Methodologies | Requirement Analysis & Gathering | Stakeholder Management & Collaboration

Analytical | Communication | Conflict Resolution | Innovation & Adaptability

Technical Skills:

- **Frontend:** Angular (v13-18), TypeScript, RxJS, NgRx, HTML5, SCSS, Tailwind CSS, Bootstrap
- **Backend:** Node.js, NestJS, Express.js, TypeORM, PostgreSQL, MongoDB, Redis
- **APIs & Messaging:** REST API, GraphQL, WebSocket
- **DevOps & Cloud:** AWS (EC2, S3, RDS, Lambda, CloudFront), Docker, Kubernetes, Nginx, Linux
- **CI/CD & Testing:** GitHub Actions, Jenkins, GitLab CI/CD, Jest, Jasmine, Cypress, JMeter, Postman
- **Practices:** Microservices, Clean Architecture, SOLID, OAuth2, JWT, RBAC, Agile/Scrum

Products Developed for Ministry of Interior (Kuwait)

E-Visa Platform (GovTech)

Secure, real-time visa processing with automated approvals.

Document Management System

Modular DMS with optimized storage and OCR-based retrieval

Enterprise Middleware Services:

Secure SOAP middleware for inter-agency system integration.

Police Examination System:

Online exam platform with real-time evaluation and automated scoring.

Work Experience

Since Mar' 2024: EBLA Computer Consultancy (Ministry of Interior), Kuwait | Sr. Software Engineer

Key Deliverables:

- Architecting, building & deploying scalable end-to-end applications, delivering high-quality features on schedule
- Mapping client / business requirements, providing customized software solutions involving finalization of product specifications and selection of appropriate techniques
- Upholding strong engineering standards through clean code, rigorous testing, and thoughtful code reviews
- Enhancing application performance, security, and database efficiency to ensure reliable user experiences
- Partnering effectively in Agile Scrum teams to deliver scalable, secure production releases aligned with government standards
- Supporting seamless releases by maintaining CI/CD pipelines and ensuring production stability

Highlights:

- Developed Kuwait's **national E-Visa platform** using Angular 18, NestJS, and MongoDB, boosting digital visa processing speed and reliability for enterprise-scale government applications
- Architected microservice-based backends with optimized queries, indexing, caching, and real-time WebSocket synchronization, **delivering 30% performance gains** across REST and SOAP services
- Implemented **robust security** using OAuth2, JWT, and RBAC for multi-tier access control in high-availability systems

Projects Handled:

- **E-Visa Platform (GovTech): Developed Kuwait's official E-Visa platform** using Angular SSR with Hydration and NestJS microservices, enabling secure, real-time visa processing and payment integration. Architected the full database schema and automated backend approval workflows, ensuring scalability, compliance, and enhanced government operational efficiency.
- **Document Management System (DMS):** Built a modular DMS with optimized storage reducing data redundancy by 40%, integrating OCR-based recognition to accelerate document retrieval and workflow automation.
- **Enterprise Middleware Services:** Engineered enterprise-grade NestJS middleware enabling secure SOAP API integrations for seamless data exchange across multiple government agencies and external organizations.
- **Police Examination System:** Developed a secure online examination platform with real-time evaluation, automated scoring, and a responsive admin dashboard for monitoring exams and tracking candidate performance.

Sep' 2020 – Jan' 2024: fedo.ai, Bengaluru | Software Engineer

Key Deliverables:

- Built responsive Angular applications with NgRx, RxJS, HTML5, CSS3, and ES6+ JavaScript; **enhanced load times by 40%** via lazy loading, code splitting, tree shaking, and state management
- Designed & optimized RESTful and GraphQL APIs using NestJS and MongoDB, **cutting response latency by 25%**
- Automated CI/CD pipelines with GitLab, Jenkins, Docker & AWS (EC2, S3, RDS, Load Balancers), accelerating releases **by 40%** with safer rollbacks
- Boosted reliability through comprehensive unit, integration, and E2E testing (Jest, Jasmine, Karma, Cypress), **reducing bugs by 30%**
- Implemented robust security protocols, encryption, and data protection in Agile teams using Jira for sprint planning, standups, and retrospectives

Projects Handled:

- **Healthcare AI Platform (Fedo Vitals):** Developed a real-time WebRTC-based vital signs detection platform using Angular, WebSockets, and backend APIs, enabling AI-driven face recognition and health parameter estimation from live video streams. Engineered facial alignment algorithms and transformed video frames into optimized signal arrays to enhance processing efficiency and platform scalability, while optimizing streaming and inference processes to reduce processing time by 30%, delivering more accurate and responsive health analytics.
- **Fintech – Health Savings Account (Fedo HSA):** Developed India's first Health Savings Account (HSA) platform integrating neo-bank APIs for seamless digital transactions, with automated account management ensuring compliance and enhanced user experience.
- **Enterprise Admin & CRM Platform (Fedo Admin Panel):** Designed a scalable CRM and product customization platform with robust APIs supporting automation, analytics dashboards, and enterprise workflow management.

Education

- **Bachelor of Engineering in Computer Science** from APJ Abdul Kalam Technological University, Kerala, India in 2019; CGPA: 6.5

Certifications:

- Full-Stack Web Development
- Node.js / Angular Advanced Training
- AWS Certified Solutions Architect – Associate

Languages Known: English, Malayalam, Hindi & German (A2)
